Insights (Hotjar & GA)

Inbound Landing Page:

- Hotjar indicates that people could be getting confused by the multiple CTAs on the top of the page.
- Almost half of users who come to the landing page, bounce immediately.
- Most traffic to the inbound marketing page seems to come from Amazon Ad System and Google Search.
- The average page load time is over 8 seconds while the average time on the page is 0.01 seconds.
- Main Referral traffic is from direct and referral

Online Application:

- The main drop off point for most application viewers is the on the "Ownership Details" section of the application.
- Almost half of users exit on the application start page.
- After direct traffic, organic search is the next highest traffic source.
- Search terms used to find the page are not necessarily for applying for financing. We are often sending users to the first part of the application before they potentially have even heard of LEAF.
- Average load time of the initial application page is 5.51 seconds, however the time on that page is 0.40 seconds.
- The most exited page is the home page (apply.leafnow.com), with almost half of new users leaving before the page loads.
- Most new viewers do not complete the application on initial visit. Returning viewers are more likely to complete or go further within the application.

Inbound Landing Page

The screenshot shows the LEAF website's inbound landing page. At the top, the LEAF logo is in the upper left. The main header features the text "Equipment & Growth Financing: It's Easier With LEAF" in white on a dark green background. Below this, a sub-header reads "From manufacturing equipment and delivery vehicles to funding the new location and product line, we help business owners solve real problems with creative financing." The central focus is a white "Get a Quote" form with three input fields: "Business Purpose" (with a dropdown menu showing "Equipment/Software"), "Finance Amount", and "Term Amount" (with a dropdown menu showing "Months"). Below the form are two buttons: "EMAIL MY QUOTE" and "APPLY NOW".

Below the form is a section titled "How Will You Power Growth With Financing from LEAF?" which contains a placeholder message: "Hotjar cannot track iframes embedded on your page. [Learn more.](#)"

The next section is titled "Here's Why So Many Businesses Choose LEAF" and includes a "SEE ALL REVIEWS" button. It features two testimonial cards. The first card, by "Ron", states: "LEAF has become my 'no-brainer' source for our equipment financing needs. They are competent, quick, efficient, and very easy to do business with. I recommend them without reservation." The second card, by "Willie", states: "My experience with LEAF Commercial Capital was good. Everyone was very helpful and did everything to help by working with me and the vendor to get my lease agreement with what would work best for me."

At the bottom of the page is a dark blue "Ready to Get Started?" section with the text "To begin your application for funding or to talk through a unique need, click below." and two buttons: "CONNECT WITH US" and "APPLY NOW".

The footer includes a "Cookie Policy" link and a small disclaimer: "This site uses cookies. Some of these cookies are essential, while others help us improve your experience by providing insights into how the site is being used. For more detailed information on our use of cookies and our data privacy protections, please see our full [Cookie Policy](#)." The LEAF logo is also present in the bottom left corner.

Inbound Landing Page Recommendations

- Remove link on logo
 - This will help bounce rates on the page and is a good practice on landing pages.
- Add an image showing a screenshot of the application
 - Showcases how the app looks when viewers are filling it out or an image of the confirmation will help users know what to expect when entering the application.
- Add a checklist above the fold with what to expect while filling out the app and/or what is required to complete the app
 - This will help with bounce rates as it will alleviate them not having this information on hand before beginning the application
- Capture initial information about viewers
 - I would recommend capturing some information about the viewer as soon as they visit the page. Potentially changing the initial form to make it Name, Business, and email would at least allow us to capture the customer's contact info to continue retargeting them with additional ads to help them move down the sales funnel.
- Update headline and subheadline to target what customer's pain point.
 - Having the headline to something that the prospect might think "That would be awesome", their next thought should be "How is that possible?" (which is the rest of the copy and social proof aka. testimonials)
- Including a quick video that explains the LEAF and how it can help businesses with financing
 - This will help viewers understand how the process works after establishing what the page is about and trust factors - testimonials
- Reduce to one CTA on page, make a contrasting color to rest of page, and make CTA text more descriptive and exciting
 - Implementing an orange or yellow/orange color for the CTA will help draw the eye of the viewer to that area and increase conversions
 - Multiple CTAs are causing confusion for viewers.
 - Recommend an A/B test. One page with the "Email Quote" and one with "Apply Now" to test which is more effective at driving interactions
 - Having a more action-oriented message on the CTA helps viewers to not only know what they are getting when converting but also gives a sense of urgency (ex. Get Financing Now!, Get a Quote Today!)
- Have one CTA (same as header) in footer of page
 - This can help with bounce rates as people are given an additional opportunity to interact with the page
 - This also gives another opportunity to encourage more conversions because you are not making the viewer scroll to the top
- Add privacy link to page
 - It is highly recommended to have a link to the privacy policy on landing pages to increase viewers' trust, making prospects feel more comfortable with submitting their personal information.
- Updating the meta description
 - Having a better description of what the page is and why to apply with LEAF.

Application Recommendations

- Update flow of application for easier user experience.
 - Creating an app that not only showcases what is needed to successfully complete the application could reduce drop offs throughout
- Making the initial application page more informative and add content to help users understand the purpose of the application
 - This would reduce some drop off traffic as it would indicate what the page is about.
- Remove indexing and add updated meta description to application page
 - Traffic that is not necessarily ready to buy is being sent to this page when Googling LEAF and its products. Removing the indexing from this page and updating the meta description will help with sending traffic more intentionally to the application
- Reduce load speed by updating page optimization
 - Having the page load as quickly as possible will help users stay on the page longer because they won't be waiting for sections to load. This includes reducing files sizes, server requests, and content on the page.

Next Steps

1. Create mockups of both the [landing page](#) and [application](#) experience via recommendations and wireframe
2. Update optimization of page and application to decrease load time
3. Remove indexing from application
4. Update meta descriptions on both landing page and application
5. Create an A/B test of different CTAs
 - Test, Review, and update based on findings
